

Signs Prohibiting Air Freshener Use Now Available

Some members of our Marshall community suffer from medical conditions commonly referred to as 'chemical sensitivity'. When exposed to the specific chemicals that their bodies cannot tolerate, they experience a wide range of 'allergic' reactions. These reactions have mild to severe effects on their health and ability to work.

Several of our MSFC coworkers experience uncomfortable and potentially dangerous chemical sensitivity reactions to the ingredients in aerosol air freshener products. To protect their safety and health, the SHE Committee approved a plan that will prohibit the use of air freshener sprays in the MSFC restrooms regularly used by these individuals.

Chemically sensitive personnel will download and print copies of the new signs, using the link to the PowerPoint file below. They will post the signs in highly visible locations within those restrooms that they normally use. Where the signs are posted, MSFC's custodial services team will remove all aerosol air fresheners from the restroom and its supply stock.

The entire Marshall Team will support this plan to preserve coworker health and safety, by honoring posted bans on air freshener use in restrooms.

We place a high priority on protecting our coworkers, and enabling all team members to make their contributions to MSFC mission and project success. The value we place on our people makes the absence of air freshener sprays in certain restrooms no more than a brief inconvenience, and an easy sacrifice to make for the welfare of others.

Your Tolerance And Support Are Greatly Appreciated!
